

SAURAV KUMAR

Full Stack Developer (Java / Spring Boot / Angular)

Lakhisarai, Bihar, India | +91 9315307748 | sauravnhk@gmail.com | linkedin.com/in/saurav0024 | github.com/sjha24

SUMMARY

Full stack developer with 2+ years shipping production features across Angular/Ionic frontends and Java Spring Boot backends. Recent work spans third-party API integration (HERE Maps routing), real-time messaging with push notifications, transactional email systems, calendar sync via service accounts, and Spring Security hardening (rate limiting, request filtering). Comfortable owning a feature end-to-end - from backend service design through debugging production issues in the client.

TECHNICAL SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Security, Hibernate/JPA, RESTful APIs, Microservices, Angular, Ionic, JavaScript, TypeScript

Integrations & Infra: Stripe, Xoxoday, Google Calendar API, Thymeleaf, Bucket4j rate limiting, JWT, AOP, WebSockets/push notifications

Databases & Tools: MySQL, PostgreSQL, Docker, Postman, Git, IntelliJ IDEA, AWS EC2, Gradle, Maven

PROFESSIONAL EXPERIENCE

Travel Hands

Jul 2024 – Present

Full Stack Developer

VIP passenger / volunteer journey-coordination platform - Angular/Ionic frontend, Java Spring Boot backend

- Integrated the Stripe payment gateway into the Travel Hands backend to process live transactions, handling secure request signing and error handling on the Spring Boot side.
- Root-caused a session bug where switching user roles in the same browser sent users to a not-found page - fixed a roleGuard flaw blocking navigation to another role's login screen and eliminated stale cross-tab state by adding explicit localStorage cleanup on role switch.
- Built a chat/messaging feature with push-notification deep-linking; replaced a fragile global-variable pending-chat pattern with a NotificationNavigationService built on a BehaviorSubject, and fixed a scroll-up pagination bug where an exactly-viewport-filling first page blocked further loads.
- Designed a two-stage OPS notification system in Spring Boot (assignment email, then separate journey-detail emails on status changes), with Thymeleaf HTML templates matching brand guidelines; resolved event-propagation issues with @TransactionalEventListener.
- Implemented Google Calendar sync via a backend-only service account - ICS attachments for Outlook/Apple Calendar and deep links for Gmail - and resolved a 403 error caused by missing Domain-Wide Delegation on attendee invites.
- Hardened the API layer: reviewed and corrected a Bucket4j-based rate limiter, a scanner-blocking filter, and a request-validation filter, fixing broken URL-pattern regex, jakarta/javax import mismatches, and unreliable IP detection behind a proxy.
- Added JWT expiry validation to the Angular auth guard, made the in-app quiz iframe URL backend-configurable via a REST endpoint with Angular DomSanitizer, and fixed a document-upload rendering bug caused by an incorrect Ionic lifecycle hook.

Neon Shark

Apr 2024 – Jul 2024

Backend Developer Intern

- Designed relational data models and core business logic for a General Store inventory/ordering system using Java, Spring Boot, Gradle, and MySQL.
- Traced and fixed integration regressions between backend services and the store's order/inventory modules, resolving each before the internal review deadline.
- Wrote backend services with onboarding in mind - consistent structure and documentation to support quick handoff to other developers.

KEY ACHIEVEMENTS

- Improved API security - corrected a Bucket4j-based rate limiter and request-validation filter that had broken URL-pattern matching and unreliable proxy IP detection, closing gaps in the request-filtering layer.

- Reduced production bugs - root-caused and fixed a role-switching authentication bug and a document-upload rendering bug (Ionic lifecycle hook), both live issues affecting user sessions.
- Improved notification reliability - rebuilt push-notification navigation as a service built on a BehaviorSubject (replacing a fragile global-variable pattern) and fixed a chat pagination bug that silently blocked message loading.
- Built and shipped features used in production - Stripe payment integration, chat/messaging with push notifications, and a two-stage OPS email + calendar-sync pipeline, all live in the Travel Hands platform.

CERTIFICATIONS

Geekster

Jul 2022 – Apr 2024

Full-Stack Development Certificate

- Completed a 21-month full stack engineering program covering end-to-end deployment pipelines; recognized as a top performer in the Backend Architecture & Core Systems module.
- Built and deployed multiple full stack projects while concurrently working internship roles.

EDUCATION

Rajiv Gandhi Proudyogiki Vishwavidyalaya
Bachelor of Technology (B.Tech)

Jul 2019 – Jul 2022

LANGUAGES

Hindi - Native/Bilingual | English - Professional Working Proficiency
